Dry Eye Patient

## Is Dry Eye Important?

- ▶ Dry eye hasn't gotten any respect
- ▶ The dry eye corner was a *very lonely place* for a long time
- ▶ The "crabgrass" of eye care

### UNTIL

- ▶ Studies began to show effect of dry eye on corneal topography and post cataract surgery visual acuity.
  - ▶ treating dry eye actually causes significant VA improvement
- ▶ Dry Eye is now the "hot dot" of eye care

Source: Darrell White, MD

- ▶ Still skeptics PROOF study Peter McDonnell MD med dir

## New starlet of Eye Care: Dry Eye

Golden globe award

## What is Dry Eye?

## Definition of Dry Eye Syndrome/ Keratoconjunctivitis sicca

- Dysfunction of the integrated lacrimal unit
  - Unstable tear film
  - Altered tear composition
  - Ocular surface and glandular inflammation
  - Ocular surface epithelial disease
  - Discomfort and reduced visual function

– Pflugfelder, Stephen: "Dry Eye: The Problem" In Pflugfelder, Beuerman and Stamm: Dry Eye and Ocular Surface Disorders 2004

## The Dry Eye Workshop (DEWS) 2007 Report

### Dry Eye:

- multifactorial disease of the tears and ocular surface
  - tear film instability
  - potential damage to the ocular surface
  - increased osmolarity of the tear film
    - inflammation of the ocular surface
  - symptoms of discomfort, visual disturbance

Dry Eye Workshop (2007). Ocul Surf 2007 Apr;5(2):75-92

# DED is an immune mediated disorder

**Figure 1.** Immunoinflammatory pathways. Desiccating stress induces tear hyperosmolarity, activating intracellular signaling pathways that initiate the production of proinflammatory cytokines (eg, interleukin [IL] 1, tumor necrosis factor [TNF], and IL-6). This proinflammatory milieu facilitates the activation and maturation of immature antigen-presenting cells (APC). Mature APCs (mAPC) migrate through the afferent lymphatics to draining lymph nodes, where they induce effector helper T cell 1 (Th1) and Th17 cells that subsequently migrate through efferent blood vessels to the ocular surface. The Th17 cells antagonize regulatory T cell (Treg) functions and lead to further expansion of Th effectors in the draining lymph nodes. Effector Th1-secreting interferon (IFN) and Th17-secreting IL-17 exert their pathogenic effects by promoting the production of proinflammatory cytokines, chemokines, matrix metalloproteinases (eg, MMP-3 and MMP-9), cell adhesion molecules (CAM), and prolymphangiogenic molecules (vascular endothelial growth factor [VEGF] D and VEGF-C) that facilitate the infiltration of pathogenic immune cells, leading to further damage of the ocular surface. IL-17R indicates IL-17 receptor; TGF, transforming growth factor.

Stevenson, Chauhan, Dana. Arch Ophthalmol 2012; 130(1):90-100

## ➤ Healthy Tears:

The tear film and ocular surface:

- form an integrated physiologic unit
- surface epithelia and secretory glands *linked via neural network.*

Sensory-driven network

- regulates secretory activity in quantity and composition
- supports homeostasis of the system.

Lemp MA; AJO 2008

Sept;146(3):350-6

## The Healthy Eye

The tear film forms a metastable covering between blinks, subserving clear vision, maintains health and turnover of the ocular surface cells

Lemp MA; AJO 2008

Sept; 146(3):350-6

## The Healthy Eye

Disturbance of *Intrinsic & Extrinsic Factors* result in final common pathway at the tear film & ocular surface resulting in Dry Eye Disease

▶ *Intrinsic*, e.g.

- increasing age
- hormone balance
- local & systemic autoimmune disease
- systemic drugs

▶ *Extrinsic*, e.g.

- topical meds
- environmental stress
- contact lens wear
- refractive surgery

Lemp MA; AJO 2008  
Sept;146(3):350-6

Dry Eye Disease: An Immune Mediated Inflammatory Disorder

## Consequences of K. Sicca

- mucus excess
- decreased luster
- punctate keratopathy
- filaments
- keratinization
- band keratopathy

## Consequences of K. Sicca

- corneal ulceration
- perforation

And if there is any doubt  
dry eye prevention &  
treatment is important...

### Cyclosporine study 0.05% (Restasis)

- ▶ Over course of 1 year
  - ▶ 32% of AT patients progressed DE severity;
  - ▶ 6% on cyclosporine therapy

### PROOF study

- ▶ Prospective 5 year: results in 2018
- ▶ Study of DES natural history

Dry eye workshop 2007

## Etiologic Classification of Dry Eye

### Aqueous Deficient

- ▶ Sjogren's Syndrome
  - ▶ Primary
  - ▶ Secondary
- ▶ Non-Sjogren's
  - ▶ Lacrimal gland deficit
  - ▶ Reflex block (e.g. surgery)
  - ▶ Systemic drugs

## Etiologic Classification of Dry Eye

### Aqueous Deficient

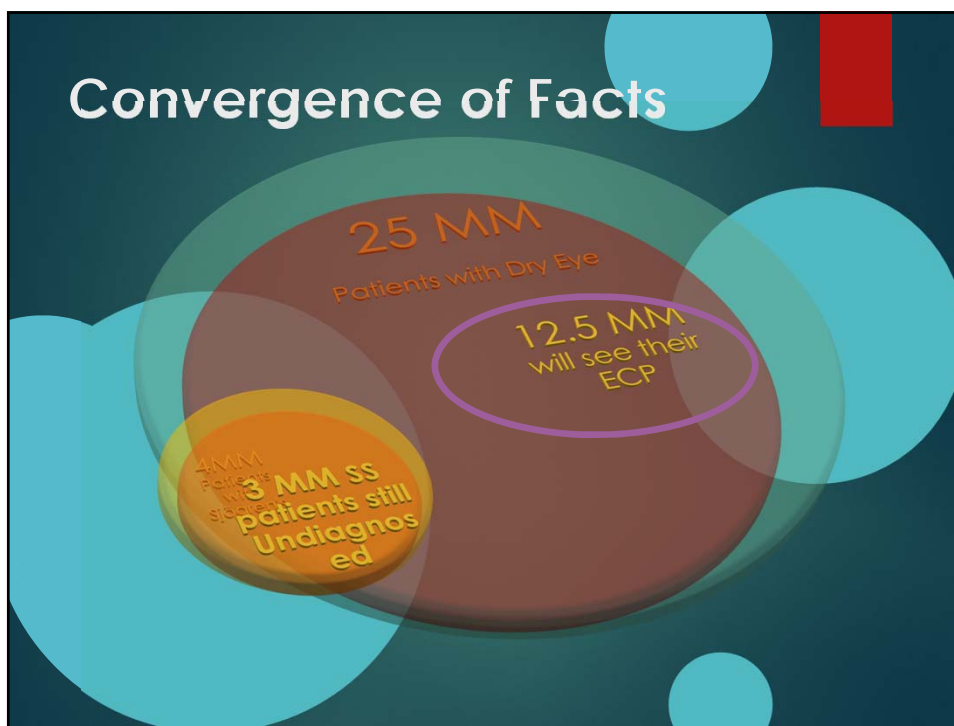

- ▶ Sjogren's Syndrome
  - ▶ Primary
  - ▶ Secondary
- ▶ SJO testing
  - ▶ Finds up to 30% of DED patients may have systemic disease

# SJO TESTING —New Diagnostic!

## Myths of Sjögren's

- ▶ *"All Sjögren's patients are identified and diagnosed"*
- ▶ *"There are only a few patients in my practice"*
- ▶ *"Nothing can be done for the patients if they are diagnosed"*
- ▶ *"Sjögren's Syndrome does not have serious long-term consequences, it is just a nuisance"*

## Impact of Sjögren's<sup>1</sup>

...s (brain fog)

... nose, recurrent sinusitis, nose bleeds

... mouth, mouth sores, dental decay; difficulty with chewing, speech, taste and textures

... skin, vasculitis, Reynaud's phenomenon

... stomach upset, gastroparesis, autoimmune pancreatitis

... peripheral neuropathy (numbness and tingling in the extremities)

... infect

... Difficulty swallowing, heartburn, reflux, esophagitis

... Recurrent bronchopneumonia, interstitial lung disease

... Arthritis, muscle pain

... Abnormal liver function tests, chronic autoimmune hepatitis, primary biliary cirrhosis

... Vaginal dryness, painful intercourse

1. <http://www.sjogrens.com/syndrome/symptoms>.

# Don't forget Sjogren's in Men

- ▶ Primary Sjogren's in men represent about 10% of all primary SS patients
- ▶ Men usually diagnosed decade later than women—61 vs 50 years ( $p < 0.01$ )
- ▶ 92% report dry eye on presentation
- ▶ Men more likely to present with more serious ocular complications than women
- ▶ SS extraglandular manifestations more likely e.g. interstitial nephritis, vasculitis  $p = 0.07$
- ▶ Men more likely negative for SS-A, SS-B, & ANA than women (36% vs 11%  $p = 0.01$ )

AJO 2015 June 17 Mathews et al

# Sjö Diagnostic Testing

**Your patients' dry eye symptoms may be rooted in a serious, progressive autoimmune disease**

Sjögren's Syndrome affects an estimated 4 million people in the US, of which 3 million are undiagnosed<sup>1,2</sup>

- Sjögren's Syndrome is 1 of the 3 most common autoimmune diseases<sup>3</sup>
- It is a slowly progressive disease characterized by degrading exocrine glands, which are responsible for producing moisture<sup>4,5</sup>
- 9 in 10 Sjögren's Syndrome patients are women<sup>6</sup>
- Sjögren's Syndrome can occur alone (primary) or in association with another autoimmune disorder (secondary)<sup>7</sup>

**Currently, there is an average delay of 4.7 years for patients to receive an accurate diagnosis for Sjögren's Syndrome.<sup>1</sup>**

**The early symptoms of Sjögren's Syndrome commonly present as routine dry eye<sup>2</sup>**

- Dry eye is a common early symptom of Sjögren's Syndrome and is considered a hallmark of the condition<sup>1,2</sup>
- Minor symptoms caused by systemic conditions such as Sjögren's Syndrome are often first addressed by an eye care professional (ECP)<sup>8</sup>
- Because the disease is most common in middle-aged women, dry eye symptoms caused by Sjögren's Syndrome are often attributed to menopause<sup>9</sup>
- The clinical presentation of Sjögren's Syndrome can be broad and nonspecific<sup>2</sup>

**As many as 1 in 10 dry eye patients also have Sjögren's Syndrome.<sup>8</sup>**

Sjögren's Syndrome may present first as dry eye, but can progress to the whole body<sup>1</sup>

**Characteristic early symptoms**

- Dry eye
- Dry mouth

**Systemic manifestations**

- Cough
- Fatigue
- Musculoskeletal pain
- Lung disease
- Liver dysfunction
- Pancreas dysfunction
- Kidney dysfunction
- Gastrointestinal complications
- Vaginal dryness
- Dry skin
- Risk of lymphoma
- Neuropathy

○ Indicates common symptoms  
○ Indicates other systemic manifestations

*Often patients are diagnosed in late stages of the disease, after gland degradation has taken effect.<sup>7</sup>*

## Sjö Diagnostic Testing

### Traditional testing

In the past, diagnosis of Sjögren's Syndrome has been challenging, with limited tools and invasive procedures

- Multiple tests need to be carried out to confirm a diagnosis<sup>8</sup>
- Salivary gland biopsy has traditionally been the gold standard for diagnosis even though it is invasive<sup>2,4</sup>
- Traditional biomarkers associated with Sjögren's Syndrome may be less likely to detect the disease at an early stage<sup>7</sup>

Biomarker	Type
SS-A (Ro)	Traditional
SS-B (La)	Traditional
Antinuclear Antibody (ANA)	Traditional
Rheumatoid Factor (RF) Levels (IgA, IgG, IgM)	Traditional

## Sjö Diagnostic Testing

### New early detection testing

Biomarker	Type	Diagnostic Characteristics
SS-A (Ro)	Traditional	Expressed in approximately 70% of patients and typically appears later in the course of the disease than novel biomarkers <sup>11</sup>
SS-B (La)	Traditional	Expressed less frequently than Ro and typically appears later in course of disease than novel biomarkers <sup>11</sup>
Antinuclear Antibody (ANA) by HEp-2	Traditional	Expressed in about 70% of Sjögren's Syndrome patients <sup>1</sup>
Rheumatoid Factor (RF) Levels (IgA, IgG, IgM)	Traditional	Found in many rheumatic conditions but is not unique to Sjögren's Syndrome <sup>1</sup>
Salivary Protein-1 (SP-1, IgA, IgG, IgM)	Novel, proprietary	Provides high specificity and sensitivity for early Sjögren's Syndrome <sup>7</sup>
Carbonic Anhydrase (CA-6, IgA, IgG, IgM)	Novel, proprietary	Offers additional sensitivity for an early diagnosis <sup>7</sup>
Parotid Secretory Protein (PSP, IgA, IgG, IgM)	Novel, proprietary	Expressed early in disease course <sup>7</sup>

# Sjö Diagnostic Test

## Sjö<sup>®</sup>—Early detection of Sjögren's Syndrome for patients with dry eye

Introducing novel biomarkers in an advanced diagnostic panel for the early identification of Sjögren's Syndrome

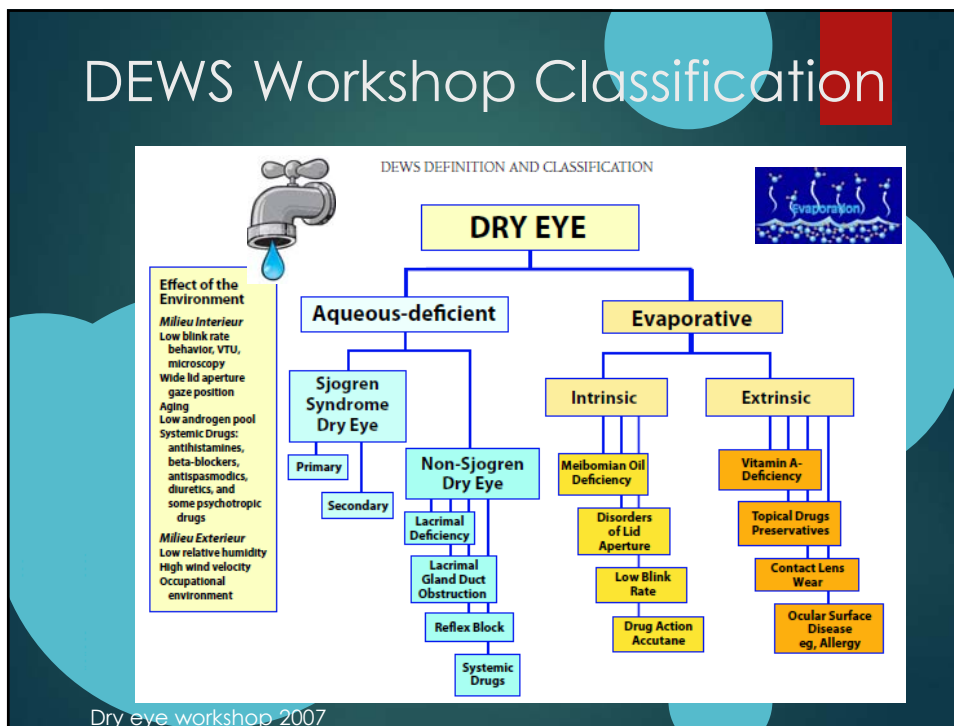

- Significantly higher sensitivity and specificity than with traditional screening methods\*
- Includes traditional biomarkers plus 3 novel, proprietary biomarkers to support earlier detection of Sjögren's Syndrome

Biomarker	Type	Diagnostic Characteristics
SS-A (Ro)	Traditional	Expressed in approximately 70% of patients and typically appears later in the course of the disease than novel biomarkers**
SS-B (La)	Traditional	Expressed less frequently than Ro and typically appears later in course of disease than novel biomarkers**
Antinuclear Antibody (ANA) by HEp-2	Traditional	Increased in about 70% of Sjögren's Syndrome patients†
Rheumatoid Factor (RF) Levels (IgA, IgG, IgM)	Traditional	Found in many rheumatic conditions but is not unique to Sjögren's Syndrome†
Salivary Protein-1 (SP-1, IgA, IgG, IgM)	Novel, proprietary	Provides high specificity and sensitivity for early Sjögren's Syndrome*
Carbonic Anhydrase (CA-6, IgA, IgG, IgM)	Novel, proprietary	Offers additional sensitivity for an early diagnosis†
Parotid Secretory Protein (PSP, IgA, IgG, IgM)	Novel, proprietary	Expressed early in disease course*

- ▶ SJO testing recently acquired by Valeant (B&L)
- ▶ Testing becoming widely available by local major laboratories
- ▶ Now covered by insurance In many cases
- ▶ Cash price ~\$1000 (US)

Turning to the  
Most Common  
Form of Dry Eye

# DEWS Workshop Classification

Dry eye workshop 2007

## Etiologic Classification of Dry Eye Evaporative—

86% of Dry Eye Patients have Evaporative Component!

# Etiologic Classification of Dry Eye

**Evaporative**—excessive water evaporation in presence of normal aqueous production

- ▶ **Intrinsic** (regulation of evaporation is directly affected)
  - ▶ Meibomian gland deficiency (posterior blepharitis)
    - ▶ Most common form

**Table 4. Meibomian gland diseases causing evaporative dry eye**

## Could eyelid tattooing induce Meibomian gland loss?

- ▶ Your patient asks: "since I cannot wear makeup due to my dry eyes, can I have eyelid tattooing?"

## Does eyelid tattooing induce Meibomian gland loss?

Study: 10 tattoo subjects, 30 controls

- ▶ Distance between eyelid tattoo and MG's measured; correl. Meibography & Meiboscore
- ▶ Results:
  - ▶ TBUT tattoo: 4.3 sec. vs 11.0 control ( $p < 0.001$ )
  - ▶ Fluorescein staining: worse tattoo ( $p < 0.001$ )
  - ▶ MG loss: 3.4 vs 0.9 control ( $p < 0.001$ )

Lee, Kim, Hyon et al Cornea 2015; 34(7):750-755

## Etiologic Classification of Dry Eye

Evaporative—excessive water evaporation in presence of normal aqueous production

- ▶ **Intrinsic** (regulation of evaporation is directly affected)
  - ▶ Meibomian gland deficiency (posterior blepharitis)
    - ▶ Most common form
    - ▶ Consider Demodex brevis (demodicosis)
      - ▶ Recurrent chalazia
  - ▶ Disorders of lid aperture
  - ▶ Low blink rate/ incomplete blinks
  - ▶ Drug action (e.g. retinoids such as Accutane)

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ **Intrinsic** conditions (cont)
  - ▶ Meibomian oil deficiency
  - ▶ Low blink rate/ incomplete blinking
  - ▶ Wide lid aperture
  - ▶ Conjunctivochalasis
  - ▶ Aging/ low androgen pool
  - ▶ Systemic drugs

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Conjunctivochalasis:
  - ▶ Loss of Tenon's capsule; redundant conj.
  - ▶ Reduces tear film reservoir

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Conjunctivochalasis:
  - ▶ Blue light and fluorescein shows redundant conjunctiva above lid margin
  - ▶ Tip of iceberg: shortens inferior fornix
  - ▶ Repair surgically

## Etiologic Classification of Dry Eye

### Evaporative (cont)

#### ▶ Intrinsic conditions

- ▶ Low blink rate/ incomplete blinking
- ▶ Wide lid aperture
- ▶ Aging
- ▶ Conjunctivochalasis
- ▶ Low androgen pool
- ▶ Systemic drugs (antihistamines, B-blockers, antispasmodics, diuretics, psychotropic drugs)

## Etiologic Classification of Dry Eye

### Evaporative (cont)

#### ▶ Extrinsic (increase evaporation by pathological effects on the ocular surface)

- ▶ Vitamin A deficiency
  - ▶ Reduced goblet cells/ glycocalyx

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Extrinsic (cont)
  - ▶ Contact lens wear
    - ▶ (62% women; 40% men)
    - ▶  Aqueous tear film and lipid layer

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Extrinsic (cont)
  - ▶ Ocular surface disease (OSD)
    - ▶ e.g. **allergy**; inflammatory goblet cell reduction (mucin)
    - ▶ Topical preservatives;
      - ▶ BAK
    - ▶ drugs e.g. **glaucoma drugs** (OSD 30-70%), antimetabolites
      - ▶ inherent drug toxicity + preservative effect

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ **Glaucoma Drugs**
- ▶ Cross-sectional study 109 patients , 79 on topical preserved glaucoma medication
- ▶ Results: Drug group
  - ▶ Shorter TBUT ( $p < 0.03$ )
  - ▶ Greater fluorescein staining ( $p < 0.001$ )
  - ▶ Higher impression cytology OSD score ( $p < 0.001$ )
  - ▶ More drops caused worse FL staining & shorter TBUT
- ▶ OSDI symptoms **NOT** different between groups

Cvenkel, et al Clin Ophthalmol 2015 Apr 8;9:625-31

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Extrinsic/ environmental conditions
  - ▶ Low relative humidity
  - ▶ High wind velocity
  - ▶ Occupational environment
  - ▶ Prolonged computer use

## Etiologic Classification of Dry Eye

### Evaporative (cont)

- ▶ Occupational environment
- ▶ Prolonged computer/ cell use

Vision Council finds ~95% of Americans spend 2 or more hours daily on digital devices.

--at risk for digital eye strain

--redness, irritation or dry eyes, blurred vision, back & neck pain, headaches

--concerns of blue light overexposure

CRST News Jan 2015

## Healthy Tear Film Components

# The Healthy Tear Film: A Delicate Balance

Lipid, aqueous & mucin components

Outer lipid layer prevents evaporation

- ▶ Secreted by meibomian glands

Image from *Dry Eye and Ocular Surface Disorders*, 2004

# Lipid Secretion: Meibomian Glands

(WC Posey, *Diseases of the Eye*, 1902)

Transillumination of meibomian glands

- ▶ The lipid layer
  - ▶ Restricts evaporation to 5-10% of tear flow
  - ▶ Facilitate tear film spreading over the ocular surface
  - ▶ Prevents skin FA's from entering/disrupting tear film

(Transillumination image from Mathers; *Dry Eye and Ocular Surface Disorders*, 2004)

## The Healthy Tear Film: A Delicate Balance

- ▶ **Aqueous** component – a complex mixture of proteins, mucins, electrolytes

- ▶ Secreted by main & accessory lacrimal glands

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## Aqueous Secretion: Lacrimal Glands

- Lacrimal glands secrete:
  - Aqueous component
  - Most tear proteins
- Similar architecture for main and accessory glands
- Androgens important for glandular homeostasis

(Sullivan et al, 1998)

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## The Healthy Tear Film: A Delicate Balance

### Mucins

- ▶ Provide viscosity & stability during blink cycle (gel-like)
- ▶ Gel decreases in density toward tear film surface

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## Mucin Secretion: Goblet Cells

- ▶ 5-20% of conjunctival epithelial cells are mucin-producing goblet cells
- ▶ Soluble mucins - essential for viscosity of the normal tear film--Helps resist thin spots and tear break-up
- ▶ Tear film is somewhat like a mucin/aqueous gel
- ▶ Inflammation causes loss of goblet cells (apoptosis)

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## Healthy Tears

- ▶ A **complex mixture** of proteins, mucin, and electrolytes
- ▶ Antimicrobial proteins: Lysozyme, lactoferrin
- ▶ Growth factors & suppressors of inflammation: EGF, IL-1RA
- ▶ Soluble mucin 5AC secreted by goblet cells provides viscosity
  - ▶ Membrane-bound mucins 1 & 4 help stabilize tear film
- ▶ Electrolytes for proper osmolarity

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## Tears in Chronic Dry Eye (CDE)

- ▶ Lesser concentrations of many proteins in CDE
  - ▶ *e.g.* antimicrobial proteins
- ▶ Growth factor concentrations decreased
- ▶ Cytokine balance shifted, promotes inflammation
- ▶ Soluble mucin 5AC greatly decreased
  - ▶ Due to loss of goblet cells
  - ▶ Impacts viscosity of tear film
- ▶ Activated proteases
  - ▶ Degrade extracellular matrix & tight junctions
- ▶ Increased electrolytes/hyperosmolar

Image from *Dry Eye and Ocular Surface Disorders*, 2004

## Overall, Who Is Most Likely to Have Dry Eye? (abbreviated epidemiology)

- ▶ Women aged 50 or older<sup>1</sup>
- ▶ Women using postmenopausal hormone replacement therapy<sup>2</sup>
- ▶ Those with ocular comorbidities<sup>3</sup>
- ▶ Contact lens wearers<sup>3</sup>
- ▶ Users of artificial tears  $\geq 3$  times/day

1. Schaumberg et al. *Am J Ophthalmol.* 2003; 2. Schaumberg et al. *JAMA.* 2001; 3. Lemp. *CLAO J.* 1995.

## Diagnosis of DES

## Diagnosis

- ▶ *Until recently, no reliable sensitive test to diagnose dry eyes*
- ▶ If relatively severe, diagnosis made based on clinical exam +/- Schirmer's testing
- ▶ Milder cases: establishment of diagnosis is often difficult and is based *more on symptoms*
  - Recent exceptions: MGD testing, Osmolarity & MMP-9?

## Diagnosis: Questionnaires

- ▶ Currently, symptom questionnaires are among most repeatable of the commonly used diagnostic tests
- ▶ ~14 commonly used questionnaires
- ▶ Signs and symptoms often don't correlate with moderate & severe disease
- ▶ Useful to monitor response to therapy

# Diagnosis Osaka study (2015) 672 Japanese office VDT users

- ▶ Found subjective happiness (subjective happiness scale) inversely correlated with dry eye symptoms score (Happy = fewer symptoms)
- ▶ Happiness Scale did not correlate with objective findings
- ▶ Worst symptoms with no objective findings found in unhappiest patients

PLoS One. 2015 Apr 1;10(4)

# Diagnosis Example symptom questionnaire: OSDI for inflammatory dry eye

**Ocular Surface Disease Index® (OSDI)<sup>®</sup>**  
Ask your patient the following 12 questions, and circle the number in the box that best represents each answer. Then, fill in boxes A, B, C, and D according to the instructions below.

**HAVE YOU EXPERIENCED ANY OF THE FOLLOWING DURING THE LAST WEEK:**

	All of the time	Most of the time	Half of the time	Some of the time	None of the time
1. Eyes that are sensitive to light?	4	3	2	1	0
2. Eyes that feel gritty?	4	3	2	1	0
3. Itchy (or itchy eyes)?	4	3	2	1	0
4. Blurred vision?	4	3	2	1	0
5. Poor vision?	4	3	2	1	0

Subtotal score for answers 1 to 5:

**HAVE PROBLEMS WITH YOUR EYES LIMITED YOU IN PERFORMING ANY OF THE FOLLOWING DURING THE LAST WEEK:**

	All of the time	Most of the time	Half of the time	Some of the time	None of the time	NA
6. Reading?	4	3	2	1	0	NA
7. Driving at night?	4	3	2	1	0	NA
8. Working on a computer or bank machine (ATM)?	4	3	2	1	0	NA
9. Watching TV?	4	3	2	1	0	NA

Subtotal score for answers 6 to 9:

**HAVE YOUR EYES EVER PROCEEDED UNUSUAL IN ANY OF THE FOLLOWING SITUATIONS DURING THE LAST WEEK:**

	All of the time	Most of the time	Half of the time	Some of the time	None of the time	NA
10. Windy conditions?	4	3	2	1	0	NA
11. Floor or area with low humidity (very dry)?	4	3	2	1	0	NA
12. Areas that are air conditioned?	4	3	2	1	0	NA

Subtotal score for answers 10 to 12:

**AND FINISHES A, B, AND C TO OBTAIN D (D = SUM OF SCORES FOR ALL QUESTIONS ANSWERED)**

**TOTAL NUMBER OF QUESTIONS ANSWERED (DO NOT INCLUDE QUESTIONS ANSWERED NA)**

Please turn over the questionnaire to calculate the patient's final OSDI<sup>®</sup> score.

**Evaluating the OSDI<sup>®</sup> Score<sup>®</sup>**

The OSDI<sup>®</sup> is measured on a scale of 0 to 100, with higher scores representing greater disability. The index demonstrates sensitivity and specificity in distinguishing between normal subjects and patients with dry eye disease. The OSDI<sup>®</sup> is a valid and reliable instrument for measuring dry eye disease severity (normal, mild to moderate, and severe) and effect on vision-related function.

**Assessing Your Patient's Dry Eye Disease<sup>®</sup>**

Use your answers D and E from slide 1 to compare the sums of scores for all questions answered (D) and the number of questions answered (E) with the chart below.  
Find where your patient's score would fall. Match the corresponding shade of red to the key below to determine whether your patient's score indicates normal, mild, moderate, or severe dry eye disease.

Number of Questions Answered (E from Slide 1)	0-4	5-9	10-14	15-19	20-24	25-29	30-34	35-39	40-44	45-49	50-54	55-59	60-64	65-69	70-74	75-79	80-84	85-89	90-94	95-99	100
1	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0

# Diagnosis

Example symptom questionnaire:

**SPEED** test

--for evaporative tear film insufficiency

Patient Name: \_\_\_\_\_ Date: \_\_\_\_\_  RIGHT EYE  
 LEFT EYE

**DRY EYE QUESTIONNAIRE - SPEED**

Please answer the following questions by checking the box that best represents your answer. Select only one answer per question.

1. Report the type of SYMPTOMS you experience and when they occur:

SYMPTOMS	AT THIS VISIT		WITHIN PAST 22 HRS		WITHIN PAST 3 MONTHS	
	YES	NO	YES	NO	YES	NO
Dryness, Grittiness or Scratchiness						
Soreness or Irritation						
Burning or Itching						
Eye Fatigue						

2. Report the FREQUENCY of your symptoms using the rating list below:

SYMPTOMS	0	1	2	3
Dryness, Grittiness or Scratchiness				
Soreness or Irritation				
Burning or Itching				
Eye Fatigue				

0 = Never 1 = Sometimes 2 = Often 3 = Constant

3. Report the SEVERITY of your symptoms using the rating list below:

SYMPTOMS	0	1	2	3	4
Dryness, Grittiness or Scratchiness					
Soreness or Irritation					
Burning or Itching					
Eye Fatigue					

0 = No problems  
1 = Irritable - not perfect but not uncomfortable  
2 = Uncomfortable - irritating but does not interfere with my day  
3 = Bothersome - irritating and interferes with my day  
4 = Intolerable - unable to perform my daily tasks

4. Do you use eye drops for lubrication?  YES  NO If yes, how often?

# Diagnosis

91 subject study of *mild to moderate* dry eye, correlating symptoms and common tests

- ▶ Aqueous deficiency tests (Phenol red thread, tear film break up time, slit lamp evaluation and impression cytology of goblet cells): *no correlation with Dry Eye Questionnaire (McMonnie's)*
- ▶ Only lipid/ mucous deficiency tests correlated with symptoms (*MG pathology, reduced goblet cell density and TBUT correlated with Dry eye questionnaire*)

Moore, Graham, Goodall et al BJO 2009:93:66-72

## Diagnosis Questionnaires caveat

- ▶ Recent studies have shown <60% of DED subjects with objective dry eye have symptoms
- ▶ Using symptoms alone likely to miss significant % of patients with DED, particularly with early/mild disease (e.g. anticipating cataract, refractive sx)

Bron, Tomlinson, Foulks, Pepose, Baudouin, Geerling, Nichols, Lemp:  
Ocul Surf 2014 Apr;12(2 Suppl):S1-31.

## Common Tests for Dry Eye

## Diagnosis: common tests

- ▶ Fluorescein staining
  - ▶ Conjunctival staining in milder cases
  - ▶ Corneal staining in more severe cases

## Diagnosis: common tests

- ▶ Fluorescein staining
  - ▶ Conjunctival staining in milder cases
  - ▶ Corneal staining in more severe cases
- ▶ Deep yellow filter (Wratten #12)
- ▶ Evaluate after 1-2 minutes to detect late staining

## Diagnosis: common tests

- ▶ Fluorescein staining
  - ▶ Conjunctival staining in milder cases
  - ▶ Corneal staining in more severe cases
  - ▶ Deep yellow filter (Wratten #12)
  - ▶ Evaluate after 1-2 minutes to detect late staining
  - ▶ Look for conjunctivochalasis folds

## Diagnosis: common tests

- ▶ Tear breakup time
  - ▶ Good aid for diagnosing meibomian gland dysfunction in presence of adequate aqueous layer
  - ▶ Fluorescein instilled, blink several times to distribute
  - ▶ Do before any anesthetic administration
  - ▶ Patient looks straight ahead without blinking

## Diagnosis: Other tests

- ▶ Fluorescein Dilution/  
Disappearance
  - ▶ Measures decrease of  
fluorescence by production  
of new tears
  - ▶ Drop fluorescein instilled  
and fluorescence measured  
over time with stop watch or  
photometer
  - ▶ Confounded by punctal  
occlusion

## Diagnosis: common tests

- ▶ Tear breakup time
  - ▶ Observe with cobalt blue light for black  
islands or streaks in the green film
  - ▶ <10 seconds abnormal

Mosby items and derived items © 2005 by Mosby, Inc.

## Diagnosis: common tests

- ▶ Rose bengal or lissamine green staining
  - Stains cells lacking protection by precorneal tear film and mucus
  - interpalpebral pattern on conjunctiva and cornea
- Milder cases staining limited to the conjunctiva

## Diagnosis: common tests

- ▶ Rose bengal or lissamine green staining
  - LG is more comfortable
  - Severest cases: most of cornea stains; mucus filaments may be present; SLK-like staining

## Diagnosis: common tests

### Schirmer's Testing (1903)

#### Schirmer's I

- ▶ Measures total reflex and basic tear secretion
- ▶ Unanesthetized
- ▶ Should not be <10 mm

## Diagnosis: common tests

- ▶ Basic Secretion Test
  - ▶ Instill topical anesthetic (wait 3-4 minutes)
  - ▶ Dry cul-de-sac
  - ▶ Insert Schirmer strips
  - ▶ Wait 5 minutes
  - ▶ Abnormal: <3mm
  - ▶ False negatives frequent due to incomplete anesthesia

## Diagnosis: common tests

### Schirmer's Testing

- ▶ Schirmer's II (measures reflex secretion)
  - ▶ Rarely used
  - ▶ Instill topical anesthetic
  - ▶ Rub nasal mucosa with cotton swab
  - ▶ Measure wetting after 2 minutes
  - ▶ Wetting <15 mm = failure of reflex secretion

## Diagnosis: common tests

### Phenol red thread test

- ▶ Less invasive
- ▶ 70mm cotton thread
- ▶ Wetting with tears 15 seconds
- ▶ Changes yellow red
- ▶ 9-20mm normal

## Less Used Tests for Dry Eye

- ▶ Tear lysozyme
- ▶ Tear lactoferrin
- ▶ Impression cytology (conjunctival)
- ▶ Tear film osmolality

**Movin'  
Right  
Along**

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ MGD Analysis
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Newer Tests for Dry Eye

- ▶ **Tear Film Osmolarity**
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ MGD Analysis
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Diagnosis: Newer tests

- ▶ Tear Film Osmolarity
  - ▶ Relatively sensitive for diagnosis
  - ▶ Tear Lab

## DEWS Definition of Dry Eye Disease

Dry eye is a multifactorial disease of the tears and ocular surface... It is accompanied by increased **osmolarity** of the tear film and inflammation of the ocular surface.

Testing for osmolarity is a good place to start

Note: the definition was updated 2 years prior to TearLab approval and based on 40+ years of research using tear osmometers requiring 500 to 1000 times the volume now needed (50 nanoliter sample)

International Dry Eye Workshop (DEWS). The definition & classification of dry eye disease. Ocul Surf 2007.

## Two Numbers Crucial to Understand Osmolarity

The MAXIMUM of the two eyes:

Tears higher than 300 mOsm/L demonstrate loss of homeostasis and likely become pathogenic > 308.

The DIFFERENCE b/w two eyes:

This shows the stability of the tear film. Normal tears are stable and < 300 mOsm/L bilaterally. A difference of > 8 mOsm/L is a hallmark of tear instability.

## Non-DED Patients are Low and Stable - DED Patients are Elevated and Unstable

	Mild/Moderate Dry Eye Patient OSDI = 22.92		Normal Patient OSDI = 4.17	
	Right Eye	Left Eye	Right Eye	Left Eye
<b>Day 1</b>				
1 min	311	326	286	288
2 min	304	324	285	289
3 min	308	308	281	281
4 min	337	334	287	286
<b>Day 2</b>				
1 min	315	321	296	284
2 min	305	313	296	291
3 min	315	323	285	291
4 min	297	343	291	287
<b>Day 3</b>				
1 min	308	307	290	292
2 min	320	312	287	291
3 min	307	309	286	286
4 min	333	332	292	295
<b>Mean</b>	<b>313</b>	<b>321</b>	<b>289</b>	<b>288</b>
<b>Stdev</b>	<b>11.8</b>	<b>11.5</b>	<b>4.6</b>	<b>3.9</b>

Keech A, et al. Curr Eye Res 2013 Apr;38(4):428-36

## Hyperosmolarity-Induced Apoptosis in Human Corneal Epithelial Cells Is Mediated by Cytochrome c and MAPK Pathways

Lihui Luo, MD,\*†‡ De-Quan Li, MD, PhD,\* and Stephen C. Pflugfelder, MD\*

FIGURE 1. ApoptTag ISOL assay in representative fields showing the increased ISOL-positive apoptotic cells in corneal epithelial cultures exposed to high-osmolarity saline-added media (+70, 90, or 120 mM NaCl) for 24 hours, compared with cells cultured in normal medium. The percentage of positive cells in each group (n = 5) is shown in the graph. \*P < 0.05, \*\*P < 0.01, and \*\*\*P < 0.001 compared with control medium.

Luo L. *Cornea*. 2007 May;26(4):452-60.

## Hyperosmolarity Upregulates EMMPRIN/MMP-9

High Osmolarity Increases EMMPRIN Expression in Human Corneal Epithelial Cells and Is Associated with an Increase in MMP-9 and a Loss of Epithelial Cell-Cell Junctions

Eric Huet,\*<sup>1</sup> Benoit Vallée,\* Jean Dalbé,\*<sup>1</sup> Samia Mourah,<sup>4</sup> Virginie Prullière-Escabasse,<sup>5</sup> Magali Tremouillères,<sup>7</sup> Kenji Kadomatsu,<sup>8</sup> Serge Doan,<sup>1</sup> Christophe Baudouin,<sup>1\*</sup> Suzanne Menashi,<sup>6</sup> and Eric E. Gabison<sup>1\*\*††</sup>

Cell remodeling, spk, surgery, ulceration

Huet E et al. *Am J Pathol*. 2011;179.

## Hyperosmolarity Upregulates

- inflammatory cytokines  
e.g. interleukins, metalloproteinases
- cycle of inflammation with apoptosis,  
T-cell infiltration
- symptoms of dryness, irritation

Huet E et al. *Am J Pathol.* 2011;179.

## Why Measure Tear Osmolarity?

Measuring osmolarity allows us to evaluate an actual **physiologic marker** rather than a “sign” of the disease such as staining or tear break up time.

Like BP or serum glucose!

## Abstract Title: Measuring Tear Film Osmolarity in Dry Eye Disease: A Review of the Literature

Christopher J. Rapuano , Rick Potvin (ASCRS 2015 Poster)

- ▶ **Purpose:** To analyze the role of objectively measuring tear film osmolarity in the diagnosis of dry eye disease, based on a review of the peer-reviewed literature.
- ▶ **Methods:** A literature search of all peer-reviewed articles associated with tear film osmolarity was conducted. Identified studies were graded into four categories: very low, low, moderate and high quality using the Grading of Recommendations Assessment, Development and Evaluation (GRADE)
- ▶ **Results:** 164 peer-reviewed study articles relevant to tear osmolarity and dry eye disease were identified. Of these, 72% indicated that tear film osmolarity was a useful diagnostic tool, while 7% suggested no utility to the test. Thirty percent of studies were rated as 'moderate' to 'high' quality based on study design. In this subgroup 73% supported the use of objective tear osmolarity measurement in dry eye diagnosis, 18% were neutral regarding the test and 10% suggested no utility.
- ▶ **Conclusion:** Tear film osmolarity has been identified as a central mechanism related to dry eye disease by the Dry Eye Workshop (DEWS) report. Peer-reviewed literature indicates that an objective evaluation of tear film osmolarity is valuable in the diagnosis of dry eye disease.

## Tear Osmolarity: various studies

## Tear Osmolarity: various studies

- ▶ What is the value of incorporating tear film measurement in assessing patient response to therapy in DED?
  - ▶ Single institution study
  - ▶ 186 patients w/ DED
  - ▶ 2 visits: Tear Osm (Tear Lab) vs OSDI symptoms & fluorescein staining (mod Oxford scheme)

### Results

Fluorescein staining and symptoms modest correlation

No correlation between change in OSM and symptoms

*Change in Tear OSM didn't correlate significantly with changes in symptoms or corneal fluorescein staining between 2 visits*

Amparo, Dana et al AJO 2013; Sept 20 Epub

## Tear Osmolarity: various studies

Recent NHS (UK) study:

--596 patients

Osm → highest positive **predictive value** of dry eye disease compared with other routine diagnostic tests (no Schirmer's testing)

% DED by Osm 72.3%, in good agreement with DEWS scores (78%)

Wong K, Din N, Ansari E, et al. Tear osmolarity prevalence in general NHS ophthalmic clinics and relation to clinical examination of dry eye. Poster presented at: XXXII Congress of the ESCRS, London, UK, Sept 13-17, 2014

## Besides the science, why Measure Tear Osmolarity?

***Patients may not think they have dry eye (e.g. down-regulated nerves).***

Osm = Objective number

- “This test shows that the Osm of your tear film is XX points above normal which indicates you have dry eye”—end of discussion
- Patients become aware of this number as something they want to work to lower, just like blood pressure or cholesterol levels
- Encourages compliance

M. McDonald, MD

## Confounding variables of tear film osmolarity

- ▶ Time from most recent eye drops (2 h minimum)
- ▶ Environmental conditions
- ▶ Patient just drive to clinic?
- ▶ Other disease process e.g. allergy, blepharitis
- ▶ Blepharitis average Osm approaches 305 cut off --  
--304 mOsm/L JAMA Ophthalmol 2015 Mar 26
- ▶ Dry eye variability of 8 mOsm is typical; between visits—makes it hard to interpret response to therapy

## Tear Osmolarity Can Be Used To Follow The Response To Treatment

- Objective way to determine if patient is responding to treatment
- Do at each follow up visit, like BP measurement
- If Osm improving, can reassure patient they are improving even if symptoms (or signs) haven't improved yet
- Don't rely on single day's measurement

## DED Can Affect Surgical Outcomes

Hyperosmolarity Can Decrease Visual Acuity and/or Quality of Vision including post-operatively

DED frequent cause of failure of premium lenses

## Osm & Contact Lenses

- ▶ Diagnosing hyperosmolarity in potential contact lens patients, particularly past failed CL wear can signal need for aggressive therapy with Omega 3's, MGD TX, plugs, Restasis...
- ▶ Once the hyperosmolarity is controlled, patients can be *more likely to wear contacts successfully*
- ▶ Studies are now showing hyperosmolarity responds well with Omega 3 supplements @ 2 months and this can be monitored over time
- ▶ Punctal occlusion has been shown in studies to reduce osmolarity in patients NOT having significant inflammation

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ **Tear Film Thickness**
- ▶ MMP-9
- ▶ MGD Analysis
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ **MMP-9**
- ▶ MGD Analysis
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Diagnosis: Other tests

MMP-9 testing

RPS clinical study

## Diagnosis: Other tests

### MMP-9 testing—InflammaDry (CLIA waved)

85% Sensitivity<sup>2</sup>

RPS clinical study

94% Specificity<sup>2</sup>

## Dry Eye Disease and *MMP-9*

Matrix metalloproteinases (MMP) are proteolytic enzymes that are produced by stressed epithelial cells on the ocular surface<sup>1</sup>

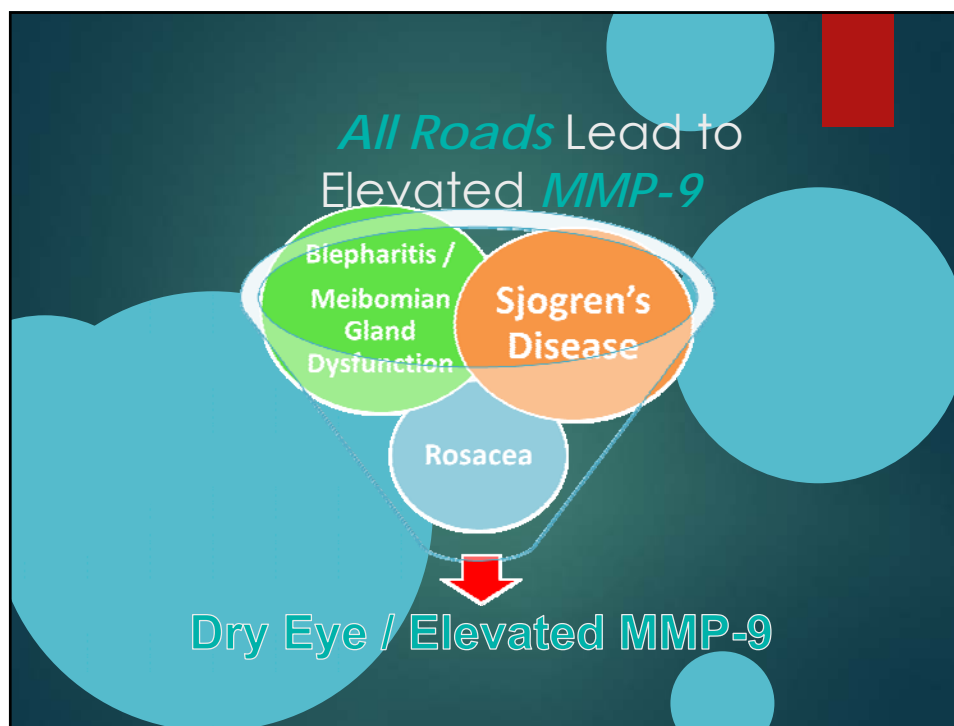

### III MMP-9 in Tears

- ▶ Non-specific inflammatory marker
- ▶ Normal range between 3-41 ng/ml
- ▶ Correlates with clinical exam findings<sup>1</sup>
- ▶ Ocular surface disease (dry eye) demonstrates elevated levels of MMP-9 in tears<sup>1</sup>

[1] Chotikavanich S, de Paiva CS, Li de Q, et al. Production and activity of matrix metalloproteinase-9 on the ocular surface increase in dysfunctional tear syndrome. Invest Ophthalmol Vis Sci. 2009 Jul;50(7):3203-9.

## Diagnosis: Other tests

### MMP-9 testing—InflammaDry

- ▶ More sensitive marker than clinical signs  
Chotikanovich, Pflugfelder et al IOVS 2009 Jul50(7):3203-9
- ▶ Reflects inflammation present before clinical signs  
Sambursky, O'Brien Curr Opin Ophthalmol 2011 Jul;22(4):294-303

## Diagnosis: Other tests

MMP-9 testing—InflammaDry

▶ 15 minute in office test

## Diagnosis: Other tests

MMP-9 testing—InflammaDry

237 patient study, 4 trial sites

Tbut, Schirmer, Staining, +/- OSDI

81-86% **positive** agreement for DES

If MMP-9 **negative**, 97-98% agreement  
not dry eye

Sambursky R et al Cornea 2014 Aug; 33(8): 812-8

## InflammaDry Compared to TearLab Osm

### ■ Osmolarity is associated with variability<sup>1-3</sup>

- ▶ Osmolarity levels vary greatly throughout the day<sup>3</sup>
- ▶ Reflex tearing may dilute osmolarity levels in the tear sample, causing further variability

### ■ MMP-9 is produced by the entire lacrimal system

- ▶ Reliable biomarker for inflammation, consistently elevated in the tears of patients with ocular surface disease<sup>4</sup>
- ▶ Reflex tearing does not affect test result

[1] Yagci A, Gurdal C. The role and treatment of inflammation in dry eye disease. *Int Ophthalmol*. 2014 Dec;34(6):1291-301. [2] Eldridge DC, Sullivan BD, Berg MD, et al. (2010) Longitudinal variability of tear film osmolarity in normal and dry eye patients. *Investig Ophthalmol Vis Sci* 51(5):3379-3381 [3] Fuerst N, Massaro-Giordano M, McCabe B, et al. Variability of tear osmolarity in dry eye patients and controls. Abstract submitted for publication (May 2014): The Association for Research in Vision and Ophthalmology. [4] Chotiakanich S, de Paiva CS, Li de Quan, et al. *Invest Ophthalmol Vis Sci* 2009; 50(7):

## Key Clinical Results<sup>1</sup>

### ■ N=237 symptomatic patients

- ▶ 61% (146/237) confirmed dry eye by TBUT, Schirmer, staining or OSDI
  - ▶ Of the 61% **confirmed** dry eye, **InflammaDry** was **positive 81%** of the time
  - ▶ Of all **symptomatic** patients, **InflammaDry** was **positive 53%** of the time
- ▶ 39% (80/237) confirmed negative by TBUT, Schirmer, staining and OSDI
  - ▶ Of the 39% **confirmed** negative, **InflammaDry** was also **negative 98%** of the time

**In patients having symptoms consistent with dry eye disease, InflammaDry is expected to be POSITIVE approximately 50% of the time.**

[1] Sambarsky R, Davitt WF 3rd, Friedberg M, Tauber S. Prospective, multicenter, clinical evaluation of point-of-care matrix metalloproteinase-9 test for confirming dry eye disease. *Cornea*. 2014 Aug;33(8):812-8.

## Cyclosporine and MMP-9<sup>1</sup>

- MMP-9 expression was evaluated by immuno-histochemistry. The mean percentage of MMP-9 expression of the conjunctival epithelial cells was significantly decreased.
- MMP-9 expression was evaluated semi-quantitatively by measuring cytoplasmic staining for MMP-9.

[1] Gürdal C, Saraç O, Genç, et al. Ocular surface and dry eye in Graves' disease. *Curr Eye Res*.2011;36:8-13.

## Punctal *Occlusion*

- Punctal occlusion has been shown to improve objective and subjective measures of dry eye to and to *exacerbate ocular surface inflammation* in subjects with overt clinical inflammation<sup>1</sup>
- The Delphi treatment guidelines for ocular surface disorders recommends that *inflammatory conditions be treated before punctal occlusion*<sup>2</sup>

[1] Pflugfelder SC. Antiinflammatory therapy for dry eye. *Am J Ophthalmol*. 2004 Feb;137(2):337-42. [2] Behrens A, Doyle JJ, Stern L, et al. The Dysfunctional Tear Syndrome Study Group. Dysfunctional tear syndrome: a Delphi approach to treatment recommendations. *Cornea*. 2006;25:900-907.

## Example: Importance of Identifying MMP-9

■ Dry eye frequently leads to contact lens intolerance

▶ **InflammaDry POSITIVE** patients will benefit from the following management plan:

- ▶ Daily disposable contact lens use
- ▶ Cyclosporine
- ▶ Omega 3 fatty acids
- ▶ Punctal occlusion after inflammation controlled

▶ **InflammaDry NEGATIVE** symptomatic patients will benefit from the following management plan:

- ▶ Daily disposable contact lens use
- ▶ Omega 3 fatty acids
- ▶ Punctal occlusion

OK, I can only add Osm or MMP-9 for DES

▶ Which one should I choose?

## OK, I can only add **Osm** or **MMP-9** for DED: *Which One?*

- ▶ Direct comparative study, *EARLYDED*
- ▶ 20 patients >60 y.o. to r/o DED
- ▶ T Osm , MMP-9 (incl InflammDry), Schirmer, TBut, OSDI, Fluorescein staining, LG staining

Results: **MMP-9** positive: 1/9 symptomatic and 2/14 suspected mild DED

T Osm positive: 6/9 symptomatic, 9/14 suspected mild DED

Thus: T Osm tends to be a more frequent early indicator (*n* was too small for adeq. P values)

Schargus, et al Cornea 2015 Apr 23

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

Diagnosis: other tests

Meibomian gland  
analysis

Diagnosis: other tests

Meibomian Gland Analysis

Why Do This?

## Meibomian Gland Dysfunction

- ▶ 2011 Report of the International Workshop on meibomian gland dysfunction
- ▶ 2 years to complete

## MGD: Leading Underlying Cause of Dry Eye!<sup>1-3</sup>

**"Meibomian gland dysfunction may well be the leading cause of dry eye disease throughout the world."<sup>4</sup>**

—The International Workshop on Meibomian Gland Dysfunction: Executive Summary

1. Lemp MA, Nichols KK. Blepharitis in the United States 2009: a survey-based perspective on prevalence and treatment. *Ocul Surf*. 2009;7(2 suppl):S1-S14.
2. Lemp MA, et al. Distribution of aqueous-deficient and evaporative dry eye in a clinic-based patient cohort: a retrospective study. *Cornea*. 2012;31(5):472-478.
3. Shimazaki J, et al. Ocular surface changes and discomfort in patients with meibomian gland dysfunction. *Arch Ophthalmol*. 1995;113(10):1266-1270.
4. Nichols KK, et al. The international workshop on meibomian gland dysfunction: executive summary. *Invest Ophthalmol Vis Sci*. 2011;52(4):1922-1929.

## MGD: Underlying Cause of Dry Eye

Ocular Surface Inflammation is often linked to meibomian gland inflammation

*“—We propose that the ocular surface and the adnexal meibomian glands should be considered as one unit, i.e. the “meibomian gland and ocular surface (MOS) when encountered in the clinical setting”*

Suzuki T, Teramakai S, Kinoshita S. Ocul Surf 2015 Apr;13(2):133-149

## Prevalence of Evaporative Dry Eye

Recent study by Lemp et al reports **86%** of patients evaluated had Evaporative Dry Eye

Lemp MA, et al. Distribution of aqueous-deficient and evaporative dry eye in a clinic-based patient cohort: a retrospective study. *Cornea*. 2012;31(5):472-478.

## VDT Dry Eye Severity (Computer Vision Syndrome)

Prospective case control study (China)

106 eyes of 53 patients

VDT time >4 h/day vs ≤ 4 h/day

OSDI, TBut, Fluorescein staining; Schirmer I

3 MGD parameters: lid margin abn; meibum score;  
meibumian gland dropout

**Conclusion:** *MGD is associated with dry eye patients in long term VDT workers with higher OSDI scores—yet may have normal tear volume*

Wu, Wang, Dong, Yang, Lin, Shang, Li: PLoS One 2014 Aug 21 e collection

## MGD and Daily Soft Contact Lens Use

Study of 41 CL users vs 31 non-users

▶ CL wearers statistically worse:

- ▶ Lid margin telangiectasias (OR 6.0)
- ▶ Rounding (OR 9.3)
- ▶ Notching (OR 3.9)
- ▶ Posterior margin hyperemia (OR 4.3)
- ▶ Orifice plugging (OR 4.8)

Greater CL wear duration resulted in greater lid margin abnormalities

## MGD is Chronic and Progressive

- Age-standardized prevalence of MGD was **56.3%** in study of 3280<sup>1</sup>
- MGD present in **30.5%** of adults 40 and over<sup>2</sup>
- 155 of 398 patients (**38.9%**) exhibited MGD<sup>3</sup>

Partial obstruction

Total obstruction

## The Pendulum has Swung!

# Meibomian Gland Dysfunction

Disease Identification

## Standard Patient Evaluation of Eye Dryness (SPEED) Questionnaire (Evaporative Tear Film Deficiency Symptoms)

### Identify

- ▶ Evaluates symptom frequency and severity
- ▶ Easy, 2-3 minutes
- ▶ Assists to identify symptoms
- ▶ Monitor response to treatment

Patient Name: \_\_\_\_\_  RIGHT EYE  
Date: \_\_\_\_\_  LEFT EYE

**DRY EYE QUESTIONNAIRE - SPEED**

Please answer the following questions by checking the box that best represents your answer. Select only one answer per question.

1. Report the type of **SYMPTOMS** you experience and when they occur:

SYMPTOMS	AT THIS VISIT		WITHIN PAST 7 DAYS		WITHIN PAST 3 MONTHS	
	YES	NO	YES	NO	YES	NO
Dryness, Grittiness or Scratchiness						
Soreness or Irritation						
Burning or Itching						
Eye Fatigue						

2. Report the **FREQUENCY** of your symptoms using the rating list below:

SYMPTOMS	0	1	2	3
Dryness, Grittiness or Scratchiness				
Soreness or Irritation				
Burning or Itching				
Eye Fatigue				

0 = Never    1 = Sometimes    2 = Often    3 = Constant

3. Report the **SEVERITY** of your symptoms using the rating list below:

SYMPTOMS	0	1	2	3	4
Dryness, Grittiness or Scratchiness					
Soreness or Irritation					
Burning or Itching					
Eye Fatigue					

0 = No problems  
1 = Irritable - not perfect but not uncomfortable  
2 = Uncomfortable - irritating but does not interfere with my day  
3 = Substantial - irritating and interferes with my day  
4 = Intolerable - unable to perform my daily tasks

4. Do you use eye drops for lubrication?  YES  NO. If yes, how often? \_\_\_\_\_

13  
7

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

# Evaluate Meibomian Glands

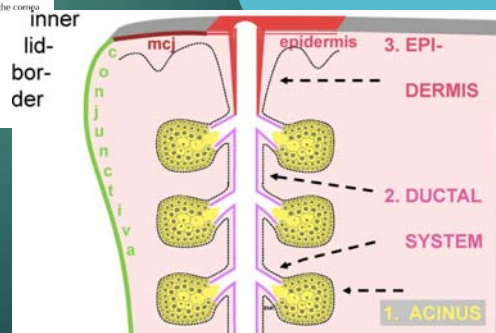

# Meibomian Gland Evaluation

## ▶ Normal Glands

- Lipid (oil) layer:
  - Lubricates and prevents evaporation
- Aqueous (water) layer:
  - Nourishes and protects the cornea
- Mucin layer:
  - Adheres tears to the eye

## Identify Ocular Rosacea

**Subtype 1:  
FACIAL REDNESS**  
(erythematotelangiectatic rosacea) Flushing and persistent redness. Visible blood vessels may also appear.

**Subtype 2:  
BUMPS AND PIMPLES**  
(papulopustular rosacea) Persistent facial redness with bumps or pimples. Often seen following or with subtype 1.

**Subtype 3:  
SKIN THICKENING**  
(phymatous rosacea) Skin thickening and enlargement, usually around the nose.

**Subtype 4:  
EYE IRRITATION**  
(ocular rosacea) Watery or bloodshot appearance, irritation, burning or stinging.

## Ocular Rosacea

- ▶ Principal cause of MGD
- ▶ Chronic inflammatory condition that affects face, nose, forehead, eyes
- ▶ Often affects **eyes only**
- ▶ Onset childhood and adults
- ▶ More often in fair skinned individuals
- ▶ No cure, chronic and progressive if not controlled

# Ocular Rosacea

# Meibomian Gland Evaluation

## Meibomian Gland Evaluation

- ▶ Ocular rosacea, selective clogging

## Meibomian Gland Evaluation

- ▶ Moderate clogging

## Meibomian Gland Evaluation

- ▶ Early gland drop out

## Meibomian Gland Evaluation

- ▶ Progressive scarring of orifices

## Meibomian Gland Evaluation

- ▶ More scarring & glandular drop out

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ **Transillumination**
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Meibomian Gland Evaluation

- ▶ Missing gland

**Transillumination**

## Meibomian Gland Tests

Look for gland truncation or dropout

## Meibomian Gland Evaluation

- ▶ 60% gland loss

## Meibomian Gland Evaluation

- ▶ Progressive gland drop out (transillumination)

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ **Blink Analysis--videography**
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Diagnosis: Lagophthalmos

--A common cause of dry eye

- ▶ Monitor blinking activity at slit lamp
- ▶ Examine for obvious lid scarring
- ▶ Exposure keratitis fluorescein pattern

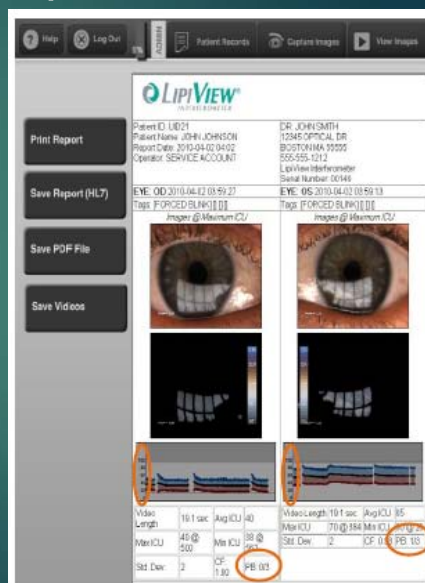

- ▶ Lipiview instrument:

—measures number of partial blinks!

## Blink Analysis

- ▶ Lipiview Videography
  - ▶ Automated result
  - ▶ Can show patients they don't blink properly

## Meibomian Gland Analysis Complete vs Partial Blinking

### Why Measure?

- Partial blinking linked to MGD development
    - 60 patient study with VII nerve palsy for more than 1 week
    - TBUT, fluorescein staining & meibomian gland expression significantly worse w/ incomplete blinkers
    - Subgroup with complete blinking only affected TBUT
- Wan T et al Current Eye Research 2015 Apr 2:1-7

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ **Meibomography**
    - ▶ MG expressibility (Korb MGE)
    - ▶ Tear film lipid layer thickness--interferometry

## Meibomian Gland Tests

### Meibomography

# Meibomian Gland Tests

## Meibomography: non-contact infrared

### OCULUS Keratograph 5M

More than just a topographer!

The new Keratograph 5M technology is a revolution in corneal topography and Dry Eye analysis. The high-resolution color camera and the integrated magnification changer offer a new perspective to the tear film assessment procedure.

**Measurements with Placido disc illumination**  
The white annular illumination is used to precisely measure thousands of points on the surface of the cornea. The infrared annular illumination is available during the tear film analysis to prevent light reflection and glare.

#### 3-D display of the meibomian glands

There are different viewing options, such as, the 3-D display, various section planes and the marking of the individual area of examination to easily evaluate the meibomian glands and the morphological changes in the upper and lower eyelids.

# Meibomian Gland Tests

## Meibomography

- ▶ Oculus 5M infrared meibography study
- ▶ 128 patients, retrospective
- ▶ Meibomian gland atrophy (meiboscore) vs. expressible glands and TBUT and age
- ▶ Meiboscores
  - ▶ Worse if poorly expressible  $p=0.003$
  - ▶ Worse if lower TBUT  $p=0.012$
  - ▶ Worse with age  $p<.0001$
  - ▶ Lower lid adequate for evaluation
  - ▶ Lower nasal third often more drop out
  - ▶ Meibography alone not sufficient for dx of MGD

### OCULUS Keratograph 5M

More than just a topographer!

The new Keratograph 5M technology is a revolution in corneal topography and Dry Eye analysis. The high-resolution color camera and the integrated magnification changer offer a new perspective to the tear film assessment procedure.

**Measurements with Placido disc illumination**  
The white annular illumination is used to precisely measure thousands of points on the surface of the cornea. The infrared annular illumination is available during the tear film analysis to prevent light reflection and glare.

LipiVIEW II

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ **MG expressibility (Korb MGE)**
  - ▶ Tear film lipid layer thickness--interferometry

## Meibomian Gland Tests

- ▶ Meibomian Gland Evaluator (MGE) (Korb)
  - ▶ 0.8-1.2 g/mm<sup>2</sup> (moderate pressure)
  - ▶ A **physiologic test** like Schirmer & Osm

<6 secreting glands: should Rx

## Newer Tests for Dry Eye

- ▶ Tear Film Osmolarity
- ▶ Tear Film Thickness
- ▶ MMP-9
- ▶ **MGD Analysis**
  - ▶ Physical inspection
  - ▶ Transillumination
  - ▶ Blink Analysis--videography
  - ▶ Meibomography
  - ▶ MG expressibility (Korb MGE)
  - ▶ Tear film lipid layer thickness--interferometry

## Meibomian gland analysis

### Tear Film *Lipid Layer* thickness

## LipiView® Ocular Surface Interferometer

Measures Lipid Layer in Nanometers

Light source: The Illuminator

Chin rest

Camera, computer and drivers are housed by the device

Touch screen control panel

Device dimensions: 28" x 17" x 17"

Measurement time: 20 seconds per eye

## LipiView® Interferometer

Mean 31 nm

A1

Mean >100 nm

A2

Finis, Geerling et al, *Evaluation of Lipid Layer Thickness Measurement of the Tear Film as a Diagnostic Tool for Meibomian Gland Dysfunction*, Cornea 2013, Oct 3 E-pub ahead of print

## LipiView® Report

Results are displayed for printout & patient education

- ✓ Evaluate the lipid layer and blink profile
- ✓ Educate patients
- ✓ Monitor treatment response
- ✓ Predict treatment outcome based on identification of partial blink (PB)

## Diagnosis: Lagophthalmos

--A common cause of dry eye

- ▶ Monitor blinking activity at slit lamp
- ▶ Examine for obvious lid scarring
- ▶ Exposure keratitis fluorescein pattern

- ▶ Lipiview instrument:

—measures number of partial blinks!

## So, how do I diagnose dry eye?

- ▶ Pre examination **Intake Questionnaire (SPEED index)**, **Medical History**, **Ophthalmic history** (CL wear, LVC, cataract surgery, other risk factors)
- ▶ Interview: Let the patient tell their story

If **symptoms** warrant, examine the patient with high degree of suspicion

## So, how do I diagnose dry eye?

- ▶ *Severe cases*: easy clinical diagnosis by **signs +/- tear test**
  - ▶ \*caution: most severe cases often asymptomatic

- ▶ *Mild cases*: establishing diagnosis is difficult (Osm or other tests may help);
  - ▶ **symptoms** most important feature

## So, how do I diagnose dry eye?

Patients should have one ocular *symptom* and one ocular *sign*:

### ▶ Symptoms:

- ▶ Daily, persistent, troublesome dry eyes for more than 3 months;
- ▶ Recurrent sensation of sand or gravel in eyes or:
- ▶ Use of tear substitutes more than 3x/day

## So, how do I diagnose dry eye?

Patients should have one ocular symptom and one ocular sign:

### ▶ Signs

- ▶ Look for **MGD** (<6 functioning glands per lower lid) (use MGE—Tear Science); entropic orifices, inspissation, telangiectatic vessels
- ▶ Typical **fluorescein** staining pattern (@ 2 minutes)
- ▶ Positive **lissamine green** or **rose bengal** staining, or
- ▶ Positive result on Schirmer test, consider **Osm**

## So, how do I diagnose dry eye?

Patients should have one ocular symptom and one ocular sign:

### ▶ Signs

- ▶ If MGD suspected, I schedule patient for Lipiview evaluation
  - ▶ Comprises
    - ▶ meibum thickness
    - ▶ Incomplete blinking analysis
    - ▶ MGE: # functioning glands lower lids
    - ▶ Meiboscopy (muscle light, soon Lipiview II meibography)

- Once dry eye diagnosed, attempt to determine severity

- Useful for explaining prognosis to the patient
- explain patient has a disease,
- explain risk of not treating disease

## My Treatment Paradigm — In a nutshell

- ▶ Treat the MGD first (3-4 months)
- ▶ MGD treatments generally assist aqueous component, reduces ongoing “fuel to the fire” inflammation (MOS)
- ▶ Finish with augmentation of aqueous component if necessary
- ▶ Mucus issues generally improve but may require additional interventions

**WHEW!**

# TREATMENT

## Dry Eye Treatment

DES

Peter Cushing making a difference

The image shows a still from the 1958 film 'Dracula' featuring Peter Cushing as the character Van Helsing. He is in a dark, industrial setting, possibly a workshop or a laboratory, wearing a brown coat. He is holding a hammer in his right hand and a chisel in his left, appearing to be working on a large, dark stone or metal block. The background is dark with some structural elements visible.

## Dry Eye Severity Classification & Treatment Overview

- DEWS Workshop proposed 4 Dry Eye severity levels
- Emphasized early and aggressive treatment appears to
  - improve quality of life
  - Prevent potentially blinding complications

DEWS Workshop Report 2007; Ocular Surface Apr;5(2)

## Dry Eye Severity Classification & Treatment Overview

- Adopt strategies that
  - Stimulate natural tear constituents
  - Maintain surface epithelial health/ barrier function
  - Inhibit inflammatory factors that adversely impact ability of ocular surface and glandular epithelia to produce tears

DEWS Workshop Report 2007; Ocular Surface Apr;5(2)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1

Mildest signs and symptoms

- ▶ Discomfort: mild and/ or episodic occurs under environmental stress
- ▶ Visual symptoms: none or episodic
- ▶ Conjunctival signs: none to mild
- ▶ Corneal/ tear signs: none to mild
- ▶ Lid/ meibomian glands: mgd variable (NOMGD)
- ▶ Schirmer: variable

DEWS Workshop Report 2007; Ocular Surface Apr;5(2)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1 (Mildest signs and symptoms)

*Treatment:*

- ▶ Limit desiccating medications (antihistamines, decongestants)
- ▶ Environmental strategies (avoid low humidity and air conditioning drafts)
- ▶ Lid hygiene/ meibomian gland function treatments e.g. Lipiflow (most wait until level 2!)
- ▶ OTC lubricants

DEWS Workshop Report 2007; Ocular Surface Apr;5(2)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1

#### *Treatment (cont):*

OTC lubricants

- ▶ Do not use preserved tears more than 4-6x/day, especially BAK...

## Human corneal epithelial cells toxicity comparisons

A. DEAD CONTROL

B. LIVE CONTROL

C. GENTAMICIN

Live cells - green  
Dead cells - red

D. LATANOPROST

E. HP-GUAR GELLABLE  
LUBRICANT EYEDROP SOLUTION

F. TRAVOPROST WITHOUT BAK

Paisley, Yee 2007

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1 Treatment (cont):

#### OTC lubricants

- ▶ Do not use preserved tears more than 4-6x/day, especially BAK
- ▶ Alternative preservatives
  - ▶ Chlorbutanol
  - ▶ Polyquad
  - ▶ EDTA
  - ▶ PHMB

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1 Treatment (cont):

#### OTC lubricants

- ▶ Alternative preservatives (cont)
  - ▶ Purite (stabilized oxychloro complex), an oxidizing preservative
    - Light exposure: sodium & chlorine free radicals, water and oxygen
    - (e.g. Refresh Tears, Alphagan P)
  - ▶ Gen Aqua (sodium perborate)
    - Catalyzed into H<sub>2</sub>O<sub>2</sub>, water, oxygen
    - (Gentel)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 1 Treatment (cont):

#### OTC lubricants

- ▶ Alternative preservatives (cont)
  - ▶ SofZia, an oxidizing preservative
    - Exposure to the eye (cations) inactivates the preservative (Travatan Z, not yet in tears)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 2

- ▶ Discomfort/severity & frequency: moderate episodic, with or without environmental stress
- ▶ Visual symptoms: annoying and/ or activity limiting, episodic
- ▶ Conjunctival signs: none to mild
- ▶ Corneal staining: variable
- ▶ MGD variably present (More often than not!!!)
- ▶ Schirmer  $\leq 10$  mm

## Dry Eye Severity Classification & Treatment Overview

### Severity level 2 Treatment:

Severity level 1 treatments prove inadequate

- ▶ Address the inflammatory component
  - ▶ Topical steroids
  - ▶ Cyclosporine
- ▶ Treat MGD, rosacea (lid hygiene, Lipiflow)
- ▶ Punctal plugs AFTER mgd & inflammation controlled
- ▶ Moisture chamber spectacles
- ▶ Lacriserts select cases

## Dry Eye Severity Classification & Treatment Overview

### Severity level 2 Treatment (cont):

#### *DRUGS/ Interventions*

- ▶ Tetracyclines (for meibomitis, rosacea), vs omega 3 fatty acids
- ▶ Topical steroids—Loteprednol 0.5% gel, oint. (Lotemax)  
Fluorometholone 0.1% (FML)
- ▶ Topical cyclosporine—Restasis; tacrolimus (FK-506)
- ▶ Secretagogues
- ▶ Punctal plugs (after inflammation controlled)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 2 Treatment (cont):

#### *DRUGS/ Interventions*

No secretagogue FDA approved for dry eyes

- ▶ Oral
  - ▶ Pilocarpine (Salagen)
- ▶ Topical
  - ▶ Diquafasol (Prolacria-Phase III) (surface cell production of mucin, fluid, ± lipid from MG)
  - ▶ Eicosanoid15-(S)-HETE (MUC1 mucus)
  - ▶ Ecabet sodium (goblet/ epithelial cell mucus)
  - ▶ Rebamipide (mucin)

## Dry Eye Severity Classification & Treatment Overview

### Severity level 2 Treatment (cont):

#### *DRUGS/ Interventions*

- ▶ Punctal plugs (after inflammation controlled)
  - Beneficial outcomes reported in 74-86% of patients treated in various studies
  - Postulated feedback mechanism to regulate tear production by lacrimal gland, i.e. significant decrease in tear production for up to 2 weeks after plug insertion

## Dry Eye Severity Classification & Treatment Overview

### Severity level 3

- ▶ Discomfort frequently severe, or constant without environmental stress
- ▶ Visual symptoms annoying, chronic &/or constant limiting activity
- ▶ Conjunctiva: +/- injection; moderate to marked staining
- ▶ Cornea: increased tear debris, mucus clumping, filaments
- ▶ MGD/ lid problems frequent
- ▶ Schirmer  $\leq 5$  mm

## Dry Eye Severity Classification & Treatment Overview

### Severity level 3 Treatment (cont):

If level 1 & 2 treatments fail:

- ▶ Never use preserved or "disappearing preservative" tears, gels or ointments
- ▶ Preservative free tears:
  - ▶ Unit dose
  - ▶ Spray (mist, liposomes)
  - ▶ Multidose silver tip (Visine Tears)
  - ▶ VIVA drops with vitamin A (Avitears)
- ▶ ASED's

## Dry Eye Severity Classification & Treatment Overview

### Severity level 3 Treatment (cont):

If level 1 & 2 treatments fail:

- ▶ Autologous serum eye drops (20-100%)

- ▶ Permanent punctal occlusion

- ▶ Therapeutic contact lenses

- ▶ PROSE, Scleral vaulting contact lenses

## Dry Eye Severity Classification & Treatment Overview

### Severity level 4

- ▶ Severe &/or disabling, constant discomfort
- ▶ Visual symptoms constant or disabling
- ▶ Conjunctiva: injected, marked staining
- ▶ Cornea: severe punctate erosions
- ▶ Increased tear debris, mucus clumping, filaments, ulceration
- ▶ Lids: keratinization, trichiasis, symblepharon
- ▶ Schirmer I:  $\leq 2$  mm

## Dry Eye Severity Classification & Treatment Overview

### Severity level 4 Treatment:

If level 3 treatments are inadequate:

- ▶ Systemic antiinflammatory agents (e.g. Sjogrens tx's)
- ▶ Surgery
  - ▶ Lid surgery: Tarsorrhaphy, ectropion and scleral show repairs
- ▶ Grafting: amniotic membrane, buccal mucus membrane, salivary gland transplantation

## Summary

- ▶ "What is dry eye?"
- ▶ Etiologic classification
  - ▶ Aqueous deficient
  - ▶ Evaporative
- ▶ "Environmental" contributions
  - ▶ Intrinsic/systemic
  - ▶ Extrinsic
- ▶ Delicate balance of healthy tears
  - ▶ Mucus, aqueous & lipid

## Summary

- ▶ Diagnostic tools
  - ▶ Questionnaires
  - ▶ Testing
- ▶ 4 levels of Dry Eye Severity (DEWS)
- ▶ Overview of Treatment Strategies

## Next Up

- ▶ Current & Future Treatment Options for Dry Eye
