

**University Technology Committee
Report to University Council
Tuesday, October 9, 2007**

We encourage other University committees to facilitate teleconference participation in University committees as Pacific continues to grow in number at multiple campuses.

Handbook Charge and Language

The Committee is reviewing our charge and responsibilities as stated in the Handbook. We hope to clarify and define some of our key responsibilities and membership.

2007-2008 Goals

1. Assessments

The Committee would like to create and perform assessments of faculty, students, and staff to determine the status of technology in the University community. These assessments will be designed to determine strengths and weaknesses. We hope to repeat these assessments on a regular basis to provide measurements and trends throughout the community.

2. Technology Plan

A small sub-committee will assist the Vice-President, Information Services in creating a Technology Plan for the University. The whole committee will provide input as well to help create a well-rounded and inclusive technology plan for the future of Pacific University.

3. Emerging Technologies

A small sub-committee will review emerging technologies and their impact on the University community. The sub-committee will evaluate these emerging technologies for possible integration throughout the University.
