(160 HOURS)**

**COMMUNITY  
OUTREACH WEEK  
(40 HOURS)**

Students will complete a shadowing experience with Virginia Garcia Memorial Hospital or Mountain View Medical Center to observe how pharmacists interact with other healthcare professionals as a team.

Students will apply information learned in the classroom and actively participate in the medication use process at every step, from drop-off to patient pick-up in the community pharmacy setting under direct supervision of a licensed preceptor.

Students will focus on applying their clinical knowledge such as utilizing EHR systems to collect and assess subjective and objective patient data to define health and medication related problems under direct supervision of a licensed preceptor.

Students will return to their community IPPE sites for one week to be involved in wellness events, such as vaccination clinics, BP/BG screenings, and wellness education.
