**KEY INFO**
- Annual test
- If Td is more than 10 years old, one dose of tetanus-Diphtheria Pertussis (Tdap) is required.
- A series of three injections (day one, day 30 and day 180, and a titer to confirm immunity, day 194)
- A series of two vaccines. This vaccination is required for International Travel and strongly recommended for all health profession students.
- Two documented vaccines OR If you have had the disease, a titer (Varicella IGG) showing immunity to disease. Documentation of the disease does not meet this requirement.

## OTHER REQUIRED DOCUMENTATION

**CPR & FIRST AID TRAINING**
- As a first year student you will be enrolled in a CPR/First Aid training during your orientation process. More information regarding this course will be forthcoming.

**Cost and available services:**
- The University Health Services Center provides immunizations and TB screening on an appointment basis at a minimal cost, though you can contact your county health department or your private physician. There may be additional costs associated with vaccinations and screening requirements, and vary depending upon your fieldwork facility, and considered an additional student academic expense.

## PROFESSIONAL RESPONSIBILITY

Health care professionals need to be properly vaccinated to protect both themselves and their client/patients from preventable diseases. The School of Occupational Therapy requires that all students maintain current health insurance, immunizations, TB screenings and CPR/First Aid certifications throughout the program. All required immunizations and certifications must be current while enrolled in the School of Occupational Therapy. If, at any time, your status on any of these should be out of compliance, you are subject to immediate suspension from the program until the deficiencies are corrected. Please do not wait until expiration of these to schedule your appointments.
