

Guidelines for Referencing Written Assignments

References

Number references consecutively in the order in which they are first mentioned in the text. Identify references in text, table, and legends by Arabic numerals in parentheses. References cited only in tables or in legends to figures should be numbered in accordance with a sequence established by the first identification in the text of the particular table or illustration.

Use the style of the examples below, which are based with slight modifications on the formats used by the U.S. National Library of Medicine in *Index Medicus*. The titles of journals should be abbreviated according to the style used in *Index Medicus*. Consult *List of Journals Indexed in Index Medicus*, published annually as a separate publication by the library and as a list in the January issue of *Index Medicus*.

Try to avoid using abstracts as references; "unpublished observations" and "personal communications" should be used only when absolutely necessary, although references to written, not oral, communications may be inserted (in parentheses) in the text. Include among the references papers accepted by no yet published; designate the journal and add "In press." Information from manuscripts submitted but not yet accepted should be cited in the text as "unpublished observations: (in parentheses).

The references must be verified by the author(s) against the original documents. Examples of correct forms of references are given below.
