2016 VPI RESEARCH CONFERENCE

The annual VPI conference gathers scholars, industrial researchers and clinicians to share knowledge and advances in the improvement of human vision. This year's conference provides the latest studies and results concerning myopic control, binocular vision, ophthalmic lenses and clinical advances in vision performance and vision therapy. There will be five themes: (1) Theories of myopic development and control; (2) binocular vision and treatments; (3) Contact lens design; (4) Advances in electronic diagnostics and refractive surgeries; (5) Technological and clinical advances in improving vision.

The Vision Performance Institute (VPI) is an organization that is dedicated to research, product development and support, and clinical care in vision performance. The mission of VPI is to perform vision research, develop vision related products, and provide specialized eye care. VPI is the primary research arm of Pacific University College of Optometry.

Mechanisms for both private and public research are provided within VPI. The association with Pacific University maintains academic integrity. These unique features make the institute an attractive venue for ophthalmic companies and consumer product companies interested in vision performance.

Pacific University

Pacific University, consistently recognized as one of America's best colleges by U.S. News and World Report, and named a "Best Western College" by the Princeton Review, is a private undergraduate liberal arts institution with graduate and professional programs in education, optometry and the health professions.

Today, Pacific University enrolls more than 3,100 students, who represent more than 30 states and 28 foreign countries. The University strives to provide an education of exceptional quality in liberal arts and sciences and selected professional programs, in preparing students for service to a changing community, nation, and world.
